

Explore a Career as a

# SOFTWARE DEVELOPER

## What do Software Developers do?

Software developers are involved with research, design, development and test operations of software, compilers, and network distribution. They create the systems that keep computers functioning properly. These could be operating systems for computers that the general public buys or systems built specifically for an organization. Often, software developers build the system's interface, which is what allows users to interact with the computer. Software developers create the operating systems that control most of the consumer electronics in use today, including the systems in phones or cars. They sometimes design embedded systems software, applying principles and techniques of computer science, engineering, and mathematical analysis.

## Training & Educational Opportunities

You will have many opportunities for employment as a software developer, but first you will need to complete specific training and earn an associate degree. Students will focus on classes related to building software in order to better prepare themselves for work in the occupation.

## As a Software Developer you will:

- Analyze information to determine, recommend and plan installation of a new system or modification of an existing system
- Consult with customers or other departments on project status, proposals or technical issues
- Develop or direct software system testing or validation procedures
- Direct software programming and development of documentation
